Every system presents two types of loops

The Reinforcing Loop

New customers in. Revenue up. Green dashboards. Confetti in Slack. It gets the team, the budget, the celebration.

The Balancing Loop

No team, no channel, no confetti. Shows up six months later as a number that should've been higher — and nobody can explain why.

The instinct, every time: push harder on the one you can see.

01 Limits to Growth

The acquisition engine works. But structural limits constrain its effectiveness.

Competitive fragmentation toward low-cost alternatives

Growing perception that basic product features is commoditising

Pricing pressure from customers who don't see differentiation

Price increases become the primary lever — creating a reinforcing loop where higher prices drive more churn

Pushing harder on acquisition produces diminishing returns.

GROWTH LIMITS ITSELF

generic archetype structure

SYSTEMS ARCHETYPE

02 Shifting the Burden

Symptomatic Solution

Discounts. Competitive promos. Price increases to patch the P&L.
Works for about a quarter — then erodes the perceived value holding the product together.

Fundamental Solution

Product stickiness. Value engineering. Features that make switching painful. The one that atrophies while the symptomatic solution gets a bigger budget every cycle.

When pricing becomes the primary lever in the absence of product evolution, the burden shifts from building value to extracting it.

SHIFTING THE BURDEN

generic archetype structure

03 Fixes that Fail

Each correction produces a delayed consequence that worsens the original problem.

Conversion incentives

Attract price-sensitive customers who churn at higher rates.

Aggressive upselling

Customers not getting value from current tier churn even faster at the next one.

Switching promos

Validate the narrative that the product is interchangeable.
Competitors have campaigns ready.

FIXES THAT FAIL

SYSTEMS ARCHETYPE

04 Growth & Underinvestment

The archetype that makes all the other ones permanent.

Under revenue pressure, the instinct is to protect margins by deferring product investment.

But when the product hasn't evolved in years and pricing has been doing the heavy lifting, that deferral hardens the structural limit with every quarter.

New capabilities, migration tooling, expansion into adjacent markets — these are the only things that widen what the growth engine can achieve. Defer them while doubling down on acquisition and pricing, and the trap gets tighter.

GROWTH AND UNDERINVESTMENT

generic archetype structure

SYSTEMS ARCHETYPE

The Spiral

Four patterns. One system.

*Each intervention that ignores
the spiral makes it spin faster.*

Every intervention that
targets one node without
addressing the system
amplifies the others.

*hardens
the limit*

**Acceleration
is a tactic.
Understanding
the system
is strategy.**

*Less confetti.
More stethoscopes.*
